

# Coding Challenge #3: Account

In this lesson, you will extend the Account class that we built in the previous and add new functionalities based on the requirements below.

## We'll cover the following ^

- Problem Statement
- Coding Exercise

## Problem Statement #

Let's build upon a previous account object exercise. A bank account is still defined by:

- A `name` property.
- A `balance` property, initially set to 0.
- A `credit` method adding the value passed as an argument to the account balance.
- A `describe` method returning the account description.

Complete the following class:

## Coding Exercise #

```
1 // Complete the class
2 class Account{
3   describe(){
4     return "Name: " + this
5   }
6 }
```
