

# Coding Challenge #2: VAT Calculation

This short coding exercise is to practice how to further manipulate the input given by the user on runtime.

## We'll cover the following ^

- Problem Statement
- Input
- Expected Output
- Coding Exercise

## Problem Statement #

Write a program that asks the user for a raw price. After that, it calculates the corresponding final price using a VAT rate of 20.6%.

## Input #

Prompt user to enter raw price, let's say user entered 1200.

```
Enter Raw Price : 1200
```

## Expected Output #

Calculate VAT for value given by user and display the final price, which for the above case is

```
Final Price: 1447.2
```
