

Exercise 1: Let's Shop

In this exercise, you will be required to define properties in an object.

We'll cover the following ^

- Problem Statement
- Example

Problem Statement

In this exercise, you are required to create an object for shopping products named `product`. This object should have the following properties:

- `name`: a `string` denoting the name of the product.
- `price`: an `integer` denoting the price of the product.
- `amount`: an `integer` denoting the amount of that product bought.
- `madeIn`: a `string` denoting the country that made the product.

For the purpose of this exercise, you can set these properties equal to whatever values you like.

Example

Sample values are given below:

- `name`: **Cheese**
- `price`: **20**
- `amount`: **10**
- `madeIn`: **USA**

Note: The solution to this exercise is available in the code widget below.

However, it'll be good practice to solve this problem yourself first. Good luck!

JS Exercise

JS Solution

```
1 var product = {  
2   //write your code here  
3 }  
4 console.log("write code here")
```
