

Coding Challenge #1: Improved Hello

This short coding exercise is to practice how to input anything from the user on runtime.

We'll cover the following

- Problem Statement
- Input
- Expected Output
- Coding Exercise

Build a habit of choosing good variable names in all exercises, starting with these ones.

Problem Statement

Write a program that asks the user for his first name and his last name. The program then displays them in one sentence.

Input

Prompt the user for his first and last name, let's say she entered following:

```
Enter FirstName : Alison
```

```
Enter LastName : Tyler
```

Expected Output

Display complete name:

```
Hello, Alison Tyler
```
