Praise for Arnav's work

In a personal e-mail

Your tutorials are well thought out, linear, and in-depth enough to explain a topic, without going overboard and rambling on. It's tough to write an article like that, and you do it well.

In response to <https://codeburst.io/explaining-value-vs-reference-in-javascript-647a975e12a0>

A really useful and helpful read as it helps to clarify I've known about but didn't know the full details about, thank you!!

Quite impressive ! I loved the way you described object creation : “ What the variable receives is the address, the location, of that array.”. Maybe some schema would help people who prefer visuals ... But everything is perfect ! :)

brilliant explanation. never knew what pure functions were or even that the map and filter methods were pure functions o: ♡

Really informative and crisp article on variable assignment in javascript

Nicely written . You helped me to revise this concept again.

Well written and easy to understand!

An awesome guide through what most developers (myself included) just use as is and hope for the best. Thank you a thousand times, i feel smarter already and am on my way to jsbin to test some out and learn more in the process. Cant wait for the article about scopes and closures that you mentioned.

In response to <https://codeburst.io/array-functions-map-filter-18a6e5f75da1>

A really good introduction to JavaScript vocabularies. When you have time, please also write about `Array.forEach` or `Array.reduce` Thank you very much! I am sure most newbie JS coders who come across this article do appreciate your effort, just too shy to say thank you Keep up the good work!

In response to <https://codeburst.io/the-simple-rules-to-this-in-javascript-35d97f31bde3>

Clear and to the point. This is one of the best explanations on “this” available on the net. I particularly liked how you explained about global function invocation being implicit method invocation on window. Thank you.

This is one of the clearest explanations of “this” that I’ve read. Definitely bookmarked. Thank you!

Clearest explanations!

In response to <https://codeburst.io/master-javascripts-object-spread-operator-2802420e00ee>

operator-3803430e99aa

Learned a lot! Thanks!

In response to <https://codeburst.io/react-ecosystem-setup-step-by-step-walkthrough-721ff45a7fc1>

great article and explained in detail. waiting for the next article for tools such as postcss, linters, etc. thanks.

Thanks a lot for such a great article, it is of great value.

In response to <https://codeburst.io/js-data-structures-linked-list-3ed4d63e6571>

Very Detailed and simplification of a Linked List. You're right though outside of interviews when does this happen? Hate questions like this because you walk-in day one after the job and nobody uses any algorithms and if you do, you always have to explain. Great stuff keep posting!

In response to <https://codeburst.io/master-javascript-prototypes-inheritance-d0a9a5a75c4e>

Having just finished a JavaScript course in college, this was a great stepping stone to move into an intermediate level if JS. Thank you. It was also very well laid out.

Awesome article. You have cleared a lot of doubt which I was having with the prototype. Thank you

In response to <https://codeburst.io/10-javascript-concepts-you-need-to>

In response to <https://codeburst.io/10-javascript-concepts-you-need-to-know-for-interviews-136df65ecce>

Thank you for the pointers. I will pay much more attentions to the fundamentals in my learning path.
