

What we will Build

At the end of this section, you will have built a movie order page for The Superman Movie.

Take a look at the image below:

Deceptively simple, isn't it?

The Objectives/Guidelines of this Design

As with programming in general, every problem can be solved in many different ways. For this design:

1. Use NO `` tag. Add all images using backgrounds.
2. Write simple markup. Do not bloat the markup with unimportant, extra tags.

The Markup

Below is the markup we will be working with.

```
1 <div class="movie">
2   <h1> The SuperMan </h1>
3   <p>An alien orphan is sent for
4     to Earth, where he grows up to
5     adoptive home's first and greatest
6     <button>Add to Cart</button>
7   </p>
8 </div>
```

In the next lesson, we will begin styling the markup.

Let's go!
