

Caching Quiz

This lesson contains a quiz to test your understanding of the caching mechanism.

Let's Test Your Understanding Of Caching In Web Architecture

1

Why is caching so important for the performance of an application? Which of the following option(s) are correct?

- ☐ A) Caching ensures low latency and high throughput. An application with cache implemented will return the response in less time as opposed to an application without a cache implemented.
- ☐ B) Caching can be implemented at multiple places in an application, thus cutting down the latency comprehensively by a significant amount.
