

Web Architecture Quiz - Part 2

This lesson contains a quiz to test your understanding of the REST API & the HTTP mechanisms.

Let's Test Your Understanding Of the REST API & the HTTP mechanisms

1

Why should we implement a REST API in our application? Which of the following option(s) are correct?

☐

A) To decouple the backend server code from multiple client implementations for a cleaner & a more flexible architecture.

☐

B) To tightly couple the backend implementation with various client implementations.

☐

C) To create a gateway, a single-entry point into the system that would help the system take care of the authorization, authentication, sanitizing the input data & other necessary tasks before it provides access to the application resources.
