Coding Challenge #1: Circles Again

This small coding exercise is designed to give you a little practice on Node.js. See if you can solve it on your own!

Problem Statement

Create a `circle.js` module exporting two functions `circumference()` and `area()`, each taking the circle radius as a parameter. Load this module in a `index.js` file and test the two functions.

Sample Output:

For Radius = 3,

Circumference = 18.84955592153876,

Area = 28.274333882308138

```
1
2
3
4
```
