Coding Challenge #3: Auto Complete
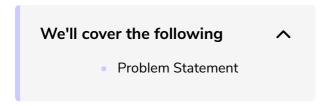

This is an additional coding exercise designed to give an advanced hands-on practice on "Form Validation."

> **We'll cover the following** ∧
>
> - Problem Statement

Problem Statement

In this exercise, you'll have to assist the user in selecting a country. As he enters the country name in an input box, the page shows a list of corresponding countries. Clicking on a suggested country replaces the value in the input box. To keep things simple, only countries starting with a "A" letter are taken into account. Here is the HTML, CSS and JavaScript code that supports the rest of the functionality:

Output
JavaScript
HTML
CSS (SCSS)

Enter a country name: [   ]
.

[⊘]   [🖫] [↩]

Console   ⊘ Clear

Complete this code to implement country autocompletion.

Enter a country name: An

Andorra
Angola
Anguilla
Antarctica
Antigua-and-Barbuda
