Where to Go From Here

Firebase is relatively easy to get started with. However, you will find that there is still a lot you can learn about it that is beyond this introductory course.

> **We'll cover the following** ^
>
> - Look at all the Firebase services
> - Final Remarks

Look at all the Firebase services

There are so many services available that it can feel overwhelming, but trust me when I tell you that each service is easy to work with. Firebase documentation is pretty good as far as the documentation is concerned.

In this course, I have covered what I believe to be the most important services, but Firebase is far-reaching, so there is still lots to learn!

I recommend you keep trying new ones out because they are all so useful.

Build better apps

Cloud Firestore
Store and sync app data at global scale
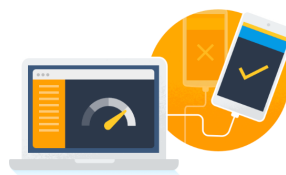

ML Kit BETA
Machine learning for mobile developers

Cloud Functions
Run mobile backend code without managing servers

Authentication
Authenticate users simply and securely

Hosting
Deliver web app assets with speed and security

Cloud Storage
Store and serve files at Google scale

Improve app quality

Crashlytics
Prioritize and fix issues with powerful, realtime crash reporting

Performance Monitoring
Gain insight into your app's performance

Test Lab
Test your app on devices hosted by Google

Grow your business

In-App Messaging BETA
Engage active app users with contextual messages

Google Analytics
Get free and unlimited app analytics

Predictions
Smart user segmentation based on predicted behavior

A/B Testing BETA
Optimize your app experience through experimentation

Cloud Messaging
Send targeted messages and notifications

Remote Config
Modify your app without deploying a new version

Realtime Database
Store and sync app data in
milliseconds

Dynamic Links
Drive growth by using deep links
with attribution

Final Remarks

I use Firebase in all of my apps which is why I wanted to get the word out about how awesome it is. Firebase is hands down my top technology choice when developing. Use one service or combine them, either way, you are going to love Firebase!

If you have suggestions or comments about this course, I would love to hear them. Drop me a line sometime!

The warmest regards (almost on fire!),

Eric
