Different Tiers In Software Architecture Quiz

This lesson contains a quiz to test your understanding of tiers in software architecture.

Let's Test Your Understanding Of Different Tiers In Software Architecture

1   What is a tier?

A)   Logical separation of components in an application or a service. The components are the database, backend application server, user interface, messaging, caching.

B)   Logical separation at the code level like the user interface layer, business layer, service layer, data access layer etc.

C)   Just the database & the backend server component in an application.

D)   Both, a component & a layer, at the code level, constitute a tier in an application.
